Modular drive system: **KEB Servo** motor

KEB **Servo** motor describes the actual program of the closed-loop synchronous motors with special suitability for all dynamic drive tasks.

Efficient drive systems result in combination with the servo inverter series **KEB COMBIVERT F5** which can be optimally preset by web-based system configuration.

Complete solutions for different requirements in machine and plant engineering result in addition with the proper encoder system for the application, optional **KEB** holding brake and a mechanical adaption of torque/speed characteristic by different gear boxes.

Pre-assembled cables form ready for connection systems and are the base for a simple installation, fast start-up and trouble-free operation.

Synchronous motors

are ideal drives for dynamic movements and offer in comparison to robust asynchronous drives significant lower mass inertia and high pulse torque.

Equipped with resolver or high-resolution SinCos encoders inclusive absolute information and electronic type plate, two series are available with up to 500% overload for all systems of rotating applications.

Synchronous motors offer a great energy optimization in machines and systems with efficiencies clearly above 95%.

DYNAMIC LINE I 0,2... 70 Nm

the approved series for general mechanical engineering

- ribbed surface with high thermal reserves
- lateral connections for encoder system and power

DYNAMIC LINE II 0,5... 50 Nm

by latest manufacturing technology increased component packaging density for special compact requirements in robotics, handling, bearing technology ...

- smooth housing surface
- parallel power and encoder connections

DYNAMIC LINE I - Synchronous servo motors SM.0

Servo motors of the series **SM.0** are permanent-field, electronic commutated synchronous motors for applications with highest requirements at simultaneously small unit volume and weight. 6-pole motors with NdFeB permanent magnets and three-phase winding for sine commutation captivate through impressed dynamics and a compact design.

DYNAMIC LINE I - motors are available with

- different rated speed
- Insulation class F
- Degree of protection IP65 (DIN EN 60034-5)
- Resolver or
- high-resolution Hiperface- / Endat- / SSI encoder

Rotating connection socket for power and feedback are general standards.

Properties

- thermal winding protection with PTC thermistor 140°C
- Shaft end with keyway
- Vibration severity grade B according to EN 60034-14
- Half-key balancing according to DIN ISO 8821 with keyway
- Flange accuracy of the grade N according to DIN 42955
- Radial groove ball bearing with high temperature resistant special grease and lifetime lubrication
- Rating designed for operating mode S1
- Ambient temperature range of -20 to +40°C
- site altitude 1000m above sea level no derating

Options

- **KEB** holding brake
- Built-on gearbox
- Special shaft
- External ventilation

DYNAMIC LINE II - Synchronous servo motors SM.5

The new synchronous motors **DYNAMIC LINE II** are characterised by increased packaging density and thereby especially predestinated for tasks with special requirements on size/volume and weight.

UL listed motors are characterised by small inertia and high overload torque and they are available alternatively also with **KEB** brake. Parallel arranged and rotating plug connections for power and position offer universal application in the mechanics. In addition to the basic version with resolver feedbacks, BISS encoder are available in single- and multiturn version.

Together with preassembled cables and the electronic type plate there is a minimum start-up time. The complete solution reduces the assembly error potential and secures high availability and best service.

Properties

- thermal winding protection with PTC thermistor 150°C
- smooth shaft end
- Vibration severity grade B according to EN 60034-14
- Degree of protection IP65 (shaft seal IP64)
- Flange accuracy of the grade N according to DIN 42955
- Radial groove ball bearing with high temperature resistant special grease and lifetime lubrication
- Rating designed for operating mode S1
- Ambient temperature range of -20 to +40°C
- site altitude 1000m above sea level no derating

Options

- **KEB** holding brake
- Gear assembly
- Special shaft
- External ventilation
- Half-key balancing according to DIN ISO 8821 with keyway

PLANET GEAR SG.AL

The gears of the series **SG.AL** offer the designer a compact, economic and precise conversion of speed and torque in the machine.

The design contains actual 4 sizes in 1 - and 2-step structure with rated output torque upto 100 Nm. The large reduction range permits an optimal adaption of motor and speed.

- high reliability and high overload security in series
- large gear ratio $i = 3 \dots 100$
- lifetime lubrication, maintenance-free
- small operating noises
- optimal efficiency $> 95 \%$
- output shaft with featherkey
- simple, direct motor connection, applicable for

DYNAMIC Line I and II

The economic gear in compact design!

Planet gears **SG.AL** AL with hardened, integrated gearing, high strength and precision at minimum dimensions offer furthermore:

Universal motor connection

to **DYNAMIC LINE** motors **I** and **II** with prepared motor flanges and clamping hubs.

Maintenance-free operation

by lifetime grease packing means: no service necessary!

Balanced properties

by precise, simple design mean good torsional backlash quality at smallest costs.

Reinforced output bearing

designed for high axial and radial force at small mounting location.

Mechanical allocation table servomotors / planetary gear
