KEB

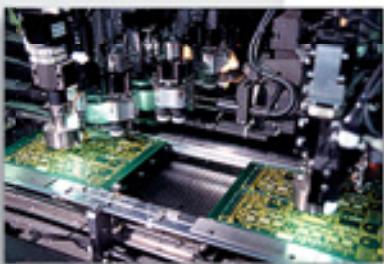

Yesterday... Today ...Tomorrow

For over 30 years KEB has been developing, manufacturing and delivering innovative solutions for your motion control requirements. We offer a comprehensive range of power transmission products employing the latest technology, not only in the design of the product, but also the application of the product as well.

The KEB product range is produced at our four modern manufacturing facilities in Barntrup-Germany, Schneeberg-Germany, Minneapolis, Minnesota and Shinjo-Japan. A certified quality system according to ISO 9001 together with constant investments in the latest production machinery, surface mount lines and CNC machine tools, ensure fast production, product reliability and competitive costs.

Many drive manufacturers talk about integrated drive control. KEB achieves this with a range of fully compatible products. They have structured levels of control that allow the selection of the appropriate technology to best suit your application.

Our philosophy is to work with you, the customer, as a partner, right from the project inception through the development to final serial production. Our objective is to help you produce a machine with state-of-the-art technology and performance!

BASIC

OPEN LOOP • SENSORLESS VECTOR • PID CONTROL

KEB F5 BASIC is the choice for open loop applications needing basic I/O. Set programming and expansive functions allow the designer to solve applications while reducing PLC demand. The F5-B is the perfect solution for advanced functionality without the closed loop price.

- ▲ available in A, B, D and E housing
- ▲ open loop operation
- ▲ KEB SMM, sensorless motor management for operation near zero speed
- ▲ internal 24VDC supply for sensors, push-buttons, etc. (100mA max)
- ▲ 2ms scan time for quick, repeatable responses to I/O
- ▲ pluggable 17 pin control terminal w/grounding bar
- ▲ 5 programmable digital inputs
- ▲ PNP logic standard, option NPN versions are available - contact KEB-
- ▲ 1 programmable analog input 0..10V, +/-10V, single ended, 11bit resolution
- ▲ 1 programmable analog output, 0..10V, +/-10V, 11bit resolution
- ▲ 2 programmable dry contact, form-c relays
- ▲ separate forward/reverse s-curve ramps
- ▲ speed search (flying start)
- ▲ analog speed command or up to 16 preset speeds
- ▲ open loop posi mode for repeatable stops from stop sensor - even if the line speed changes
- ▲ PID process control for pressure, heat, level control
- ▲ mechanical brake handling/timing functions
- ▲ power off mode allows controlled stop of spinning tools during power loss
- ▲ 2 programmable timers or counters - values are retained even under power loss

BASIC INDEXING

KEB

OPEN LOOP • SENSORLESS VECTOR • PID CONTROL • POSI

KEB F5 BASIC INDEXING is the choice for applications traditionally solved with clutch/brake modules but don't quite demand servo-level performance. Built off of the F5-B, the F5-Bi gives the designer a simple, pre-programmed solution for: indexing conveyors, cut-to-lengths, transfers, or anywhere modest repeatability is needed.

- ▲ all listed functions of the BASIC control, plus
- ▲ stop distance compensation based on line speed
- ▲ same stopping point over a 5:1 speed range (typical)
- ▲ +/- 20 degrees motor shaft stop signal window (2ms scan time x 1800 rpm)
- ▲ up to 30/40/50 cpm solved with KEB's standard low inertia AC motors
- ▲ proven solution since first introduced in 1993 - known as F0 Posi

COMPACT

OPEN LOOP • SENSORLESS VECTOR • POSI • PID CONTROL • EXPANDE

KEB F5 COMPACT is the choice for open loop applications need expanded I/O. Expanding on the F5-B, the F5-C doubles the number of inputs and outputs allowing the designer advanced sensor, buttons/limits, and command signal handling. The F5-C is the inverter for advanced open loop applications.

- ▲ available in B, D, E, G, H and R housing
- ▲ open loop operation
- ▲ KEB SMM, sensorless motor management for operation near zero speed
- ▲ internal 24VDC supply for sensors, push-buttons, etc. (100mA max)
- ▲ external 24VDC terminals to keep control card alive while high voltage is off
- ▲ 2ms scan time for quick, repeatable responses to I/O
- ▲ pluggable 29 pin control terminal w/grounding bar
- ▲ 8 programmable digital inputs
- ▲ PNP/NPN logic selectable by parameter
- ▲ 2 programmable analog inputs 0..10V, +/-10V, 0..20mA, 4..20mA, push-pull, 12bit resolution
- ▲ 2 programmable analog outputs, 0..10V, +/-10V, 11bit resolution
- ▲ 2 programmable transistor (open-collector/sourcing) digital outputs
- ▲ 2 programmable dry contact, form-c relays

APPLICATION

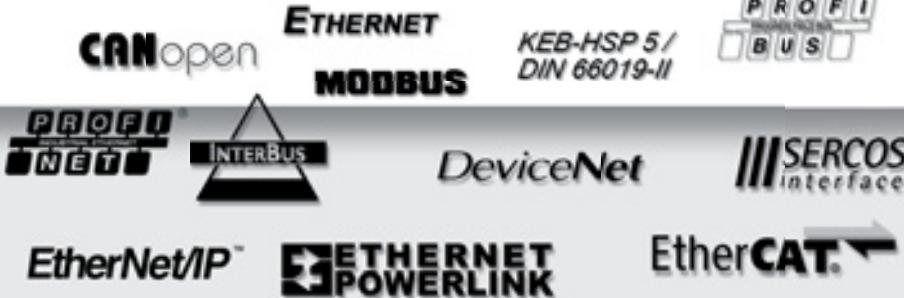

OPEN LOOP • SENSORLESS VECTOR • CLOSED LOOP • FLUX VECTOR •

KEB F5 APPLICATION is the choice for open and closed loop applications needing performance and flexibility. Designed to run either induction or servo motors, the designer can standardize on one drive platform independent of motor type. Closed loop functionality includes full torque and speed control, positioning mode and electronic gearing. Offered in the complete power range, the F5-A is the unified drive platform.

- ▲ available in A, D, E, G, H, R, U, W and P housing
- ▲ open loop operation
- ▲ closed loop operation
- ▲ AC servo
- ▲ flux vector
- ▲ KEB SMM, sensorless motor management for operation near zero speed
- ▲ internal 24VDC supply for sensors, push-buttons, etc. (100mA max) (not on A housing)
- ▲ external 24VDC terminals to keep control card alive while high voltage is off
- ▲ 1ms scan time for quick, repeatable responses to I/O
- ▲ pluggable 29 pin control terminal w/grounding bar (17 by A housing)
- ▲ 8 programmable digital inputs (5 by A housing)
- ▲ PNP/NPN logic selectable by parameter (PNP only by A housing)
- ▲ 2 programmable analog inputs 0..10V, +/-10V, 0..20mA, 4..20mA, push-pull, 12bit resolution (1 @ 11bit by A housing)
- ▲ 2 programmable analog outputs, 0..10V, +/-10V, 11bit resolution (1 by A housing)
- ▲ 2 programmable transistor (open-collector/sourcing) digital outputs
- ▲ 2 programmable dry contact, form-c relays (1 by A housing)
- ▲ encoder feedback card option - TTL, HTL, resolver, Sin/Cos, SSI, Biss, EnDat, Hiperface, pulse/dir, and UVW (TTL, resolver by A housing)

AC SERVO • TORQUE CONTROL • POSITIONING • ELECTRONIC GEARING

- ▲ separate forward/reverse, lower/upper s-curve ramps
- ▲ ogive function for smooth abort of speed profile
- ▲ speed search (flying start)
- ▲ analog speed command or up to 32 preset speeds (16 by A housing)
- ▲ closed loop positioning using the motor encoder or a secondary position encoder
- ▲ 32bit position values by digital presets (up to 32 individual positions) or by analog input
- ▲ built in homing routines and end limit sensor handling
- ▲ relative or absolute moves and on-the-fly distance stop modes
- ▲ round table positioning with or without shortest path selection
- ▲ contour positioning for fieldbus positioning systems
- ▲ angular- or velocity-lock electronic shaft modes
- ▲ up to 8 preset gear ratios or gear ratio via analog input command
- ▲ phase advance/retard support
- ▲ on-the-fly synch ramp start
- ▲ programmable torque limit with separate forward/reverse and motor/generator values
- ▲ analog torque control - standard or 250us fast-scan
- ▲ programmable torque ramp limit
- ▲ automatic servo motor pole identification
- ▲ NEW! SPI - stationary pole identification
- ▲ feed forward inertia control (speed controller)
- ▲ PID process control for pressure, heat, level control
- ▲ mechanical brake handling/timing functions
- ▲ power off mode allows controlled stop of spinning tools during power loss
- ▲ UPS mode for reduced current demand during emergency power operation
- ▲ 2 programmable timers or counters - values are retained even under power loss

Selection and dimensioning of servo motors should be made according to rated current, current at standstill and peak current.

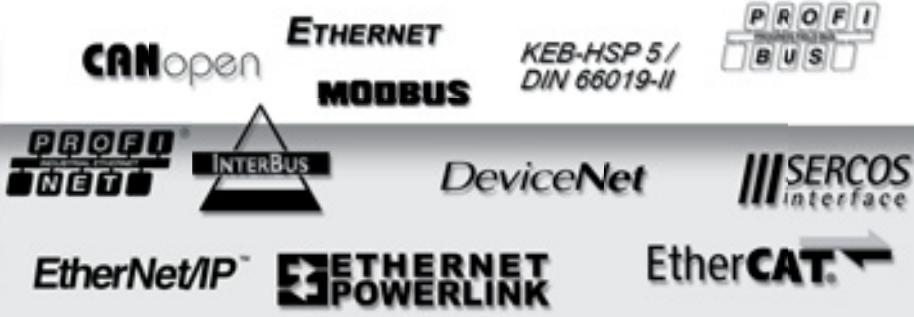

SCL

SENSORLESS CLOSED LOOP • AC SERVO • PID CONTROL • TORQUE CONTROL

KEB F5 SCL is the latest in servo motor control. Sensorless Closed Loop means closed loop operation, without encoder. Using advanced motor modeling and current sensing, KEB's SCL replaces a traditional encoder with a simulated encoder. The solution provides full torque and speed control, positioning mode and electronic gearing. Let KEB discuss your application to see if SCL works for you!

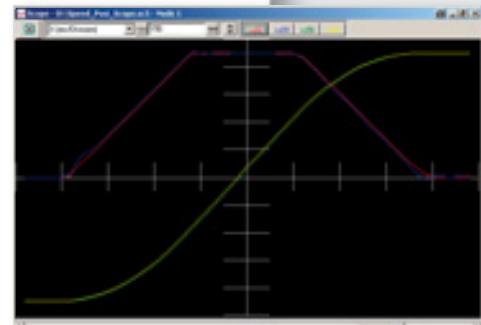

- ▲ available in A, D, E, G, H, R, U, W and P housing
- ▲ closed loop operation
- ▲ sensorless closed loop operation - performance of closed loop without an encoder
- ▲ AC servo
- ▲ internal 24VDC supply for sensors, push-buttons, etc. (100mA max)(not by A housing)
- ▲ external 24VDC terminals to keep control card alive while high voltage is off
- ▲ 1ms scan time for quick, repeatable responses to I/O
- ▲ pluggable 29 pin control terminal w/grounding bar (17 by A housing)
- ▲ 8 programmable digital inputs (5 by A housing)
- ▲ PNP/NPN logic selectable by parameter (PNP only by A housing)
- ▲ 2 programmable analog inputs 0..10V, +/-10V, 0..20mA, 4..20mA, push-pull, 12bit resolution (1 @ 11bit by A housing)
- ▲ 2 programmable analog outputs, 0..10V, +/-10V, 11bit resolution (1 by A housing)
- ▲ 2 programmable transistor (open-collector/sourcing) digital outputs
- ▲ 2 programmable dry contact, form-c relays (1 by A housing)
- ▲ encoder feedback card option - TTL, HTL, resolver, Sin/Cos, SSI, Biss, EnDat, Hiperface, pulse/dir, and UVW (TTL, resolver by A housing)

CONTROL • POSITIONING • ELECTRONIC GEARING

- ▲ separate forward/reverse, lower/upper s-curve ramps
- ▲ ogive function for smooth abort of speed profile
- ▲ speed search (flying start)
- ▲ analog speed command or up to 32 preset speeds (16 by A housing)
- ▲ closed loop positioning using the motor encoder or a secondary position encoder
- ▲ NEW! closed loop positioning without encoder, SCL positioning
- ▲ 32bit position values by digital presets (up to 32 individual positions) or by analog input
- ▲ built in homing routines and end limit sensor handling
- ▲ relative or absolute moves and on-the-fly distance stop modes
- ▲ round table positioning with or without shortest path selection
- ▲ angular- or velocity-lock electronic shaft modes
- ▲ up to 8 preset gear ratios or gear ratio via analog input command
- ▲ phase advance/retard support
- ▲ on-the-fly synch ramp start
- ▲ programmable torque limit with separate forward/reverse and motor/generator values
- ▲ analog torque control - standard or 250us fast-scan
- ▲ programmable torque ramp limit
- ▲ automatic servo motor pole identification
- ▲ NEW! SPI - stationary pole identification
- ▲ feed forward inertia control (speed controller)
- ▲ mechanical brake handling/timing functions
- ▲ power off mode allows controlled stop of spinning tools during power loss
- ▲ UPS mode for reduced current demand during emergency power operation
- ▲ 2 programmable timers or counters - values are retained even under power loss

Selection and dimensioning of servo motors should be made according to rated current, current at standstill and peak current.

ASCL

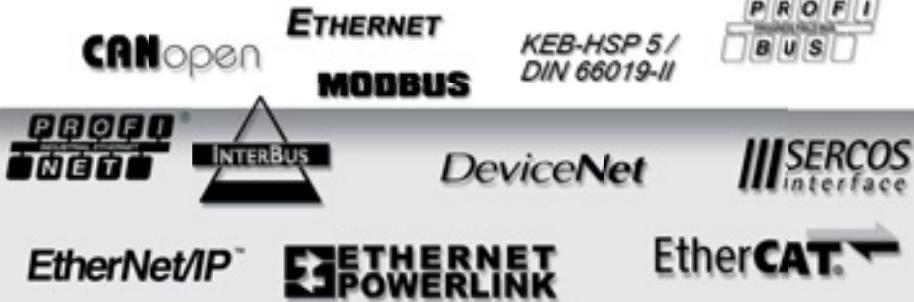

OPEN LOOP • CLOSED LOOP • SENSORLESS CLOSED LOOP • AC MOTO

KEB F5 ASCL is the latest in induction motor control. Asynchronous Sensorless Closed Loop means closed loop operation, without encoder. Using advanced motor modeling and current sensing, ASCL replaces a traditional encoder with a simulated encoder. The solution provides full torque and speed control. Let KEB discuss your application to see if ASCL works for you!

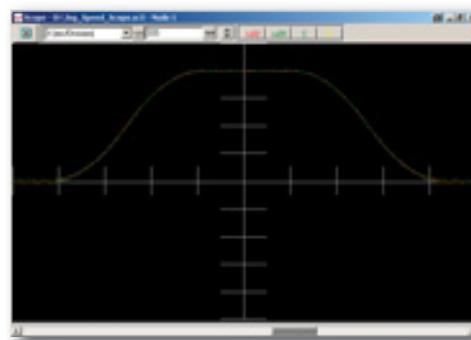

- ▲ available in D, E, G, H, R, U, W and P housing
- ▲ open loop operation
- ▲ closed loop operation
- ▲ sensorless closed loop operation - performance of closed loop without an encoder
- ▲ flux vector
- ▲ KEB SMM, sensorless motor management for operation near zero speed
- ▲ internal 24VDC supply for sensors, push-buttons, etc. (100mA max)
- ▲ external 24VDC terminals to keep control card alive while high voltage is off
- ▲ 1ms scan time for quick, repeatable responses to I/O
- ▲ pluggable 29 pin control terminal w/grounding bar
- ▲ 8 programmable digital inputs
- ▲ PNP/NPN logic selectable by parameter
- ▲ 2 programmable analog inputs 0..10V, +/-10V, 0..20mA, 4..20mA, push-pull, 12bit resolution
- ▲ 2 programmable analog output, 0..10V, +/-10V, 11bit resolution
- ▲ 2 programmable transistor (open-collector/sourcing) digital outputs
- ▲ 2 programmable dry contact, form-c relays
- ▲ encoder feedback card option - TTL, HTL, resolver, Sin/Cos, SSI, Biss, EnDat, Hiperface, pulse/dir, and UVW

DR • PID CONTROL • TORQUE CONTROL

- ▲ separate forward/reverse, lower/upper s-curve ramps
- ▲ ogive function for smooth abort of speed profile
- ▲ speed search (*flying start*)
- ▲ analog speed command or up to 32 preset speeds
- ▲ programmable torque limit with separate forward/reverse and motor/generator values
- ▲ analog torque control - standard or 250us fast-scan
- ▲ programmable torque ramp limit
- ▲ feed forward inertia control (*speed controller*)
- ▲ PID process control for pressure, heat, level control
- ▲ mechanical brake handling/timing functions
- ▲ power off mode allows controlled stop of spinning tools during power loss
- ▲ UPS mode for reduced current demand during emergency power operation
- ▲ 2 programmable timers or counters - values are retained even under power loss

Dimensions

KEB COMBIVERT F5 units are designed with modularity in mind. Several design constructions are possible:

- ▲ Standard “bookshelf” IP20 allow side-by-side mounting.
- ▲ Optional back-mount (through 100 Hp) EMI filter requires no additional panel footprint. Can be ordered “factory installed.”
- ▲ Optional back-mount (through 30 Hp) dynamic braking resistor requires no additional panel footprint. Can be ordered “factory installed.”
- ▲ Optional FLAT- REAR (**FR**) heatsink for direct connection to cooling plates.
- ▲ Optional LIQUID-COOLED (**LC**) - heatsink for efficient heat management and reduced cabinet cooling requirements. Higher switching frequencies and/or power ratings per housing are additional benefits.
- ▲ Optional EXTERNAL-HEAT (**EH**) push-through heatsink for reduced cabinet cooling requirements.

Braking Resistors

KEB braking resistors are UL recognized and supplied with temperature sensors as standard. Available in compact back-mount versions for pulse energy or higher duty side-mount versions.

Back-Mount Braking Resistor

Housing	KEB Part Number	R [Ω]	P _D [W]	Usage for 230VAC Inverters [Hp]							Usage for 460VAC Inverters [Hp]

Keypad Programming

KEB COMBIVER F5 units are designed to operate with or without an operator. For programming or status display, KEB offers both LED (easy viewing) and LCD (plain text display) keypad operators.

LCD Operator

Plain text display in six languages. 4MB internal memory for storing programs and documentation. SD card slot for easy “in-the-field” updates.

Operator 00F5060-K000

LED Operator

Basic 5 digit, 7 segment LED display and keypad. Easily viewable even in the brightest installations.
Operator 00F5060-1000

Serial Operator

5 digit, 7 segment LED display and keypad with a RS232/RS485 serial port.
KEB DIN66019II protocol, up to 56kbaud
Operator 00F5060-2000

COMBIVIS 5 is a universal tool for programming and troubleshooting KEB COMBIVERT F5 installations

- ▲ complete management of equipment settings
- ▲ display and adjustment of all parameters in up to 8 sets
- ▲ configuration and verification of customized CP parameters
- ▲ analysis of drive and control communication
- ▲ display of physical parameters and monitoring of operation data
- ▲ virtual oscilloscope function for real time monitoring and storage of drive parameters

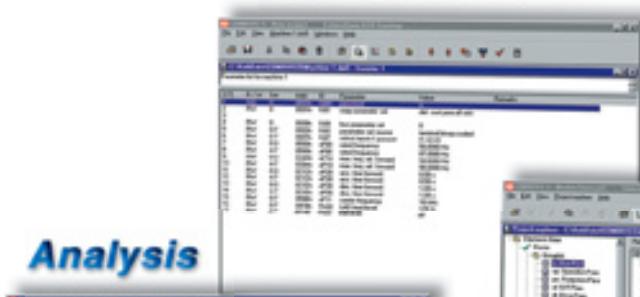

COMBIVIS STARTER KIT

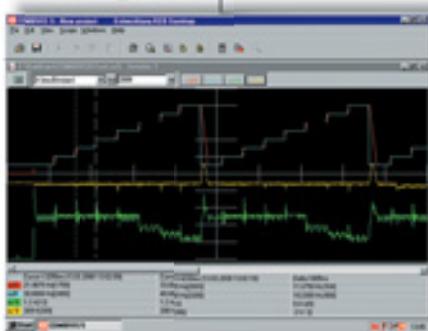

PC Software, eManuals
Serial Cable, HSP5 Cable
RS45 Adapter

Accessories:

KEB Serial Cable RS232 - PN 0058028-001D
(for use with serial operator 00F5060-2000)

KEB HSP5 Cable - PN 00F50C0-0010
(for direct connection to all F5 inverters)

KEB RJ4S Adapter - PN 00F50C0-0020
(for connecting HSP5 cable to fieldbus operator service port)

Fieldbus Communications

KEB fieldbus operators provide a modular hardware and software solution to communications. Easily support customer-preferred solutions with a swap of an operator.

Accessory
Driver software for S7
02B00SW-S710

Profibus Operator, 00F5060-3000 / -3100
Slave connection up to 12.5 MBaud,
IN-/OUT-connection submin-D-9,
Service interface via HSP5-adapter

InterBus Operator, 00F5060-4000
InterBus remote IN-/OUT-connection submin-D-9,
Service interface via HSP5-adapter

CAN Operator, 00F5060-5010 / -5110
CANopen profile DS 301 (DS402)
IN-/OUT-connection submin-D-9,
Service interface via HSP5-adapter

Operator 00F5060-6000
SERCOS IN-/OUT- FSMA connector,
Service interface via HSP5-adapter

Operator 00F5060-7000
Device Net IN-/OUT-connection Open Entry,
Service interface via HSP5-adapter

Accessory for HSP5-service interface
HSP5 adapter 00F50C0-0020
for service connection on all operator options

*Interface Operator, 00F5060-2000 / -2100
universal open KEB protocol for PC and PLC-connection
RS 232 / 485-connection submin-D-9*

MODBUS

*Operator 00F5060-A000
MODBUS SUBD9
(female) connection,
Service interface
via HSP5-adapter*

KEB-HSP 5 / DIN 66019-II

Accessory
Driver software for
WIN 95/98/NT/2000/XP
KEBCOM FDSW020-0100
supports the PC-connection for the
protocols KEB DIN 66019-II,
KEB-HSP5, InterBus and TCP/ IP

Ethernet TCP/IP

*Operator 00F5060-8000
ETHERNET RJ45 connection IEEE 802.3
10Base-T (10 Mbaud),
Service interface via HSP5-adapter*

EtherCAT™

*Operator 00F5060-F000
RJ45 connection
Service interface via HSP5-adapter*

ETHERNET POWERLINK

*Operator 00F5060-H000
RJ45 connection
Service interface via HSP5-adapter*

PROFI NET®

*Operator 00F5060-L100
RJ45 connection
Service interface via HSP5-adapter*

EtherNet/IP™

*Operator 00F5060-M100
RJ45 connection
Service interface via HSP5-adapter*

Open Operator

KEB OPEN OPERATOR provides a cost effective application specific solution. Built from a serial operator, customer specific solutions are added to the existing source code. Secure “trade-secret” solutions can be achieved with minimal investment.

- ▲ Standard C programming
- ▲ build custom “routines” or **functions**
- ▲ build custom parameters and text descriptions
- ▲ store drive programs or machine setups
- ▲ no source code is stored in the microprocessor
(like a PLC)-only a binary MOT file.

Open Operator
00F5060-2004

Programming Specifications

- Hitachi H8S/2612 advanced mode CPU
- approx. 78 KB flash-ROM available for additional code
- approx. 0.75 KB RAM available for variables
- 1 KB EEPROM for non-volatile variables
- Renesas embedded workshop programming suite

C5 Multi Axis Controller

KEB

KEB COMBICONTROL C5 provides a powerful control platform for drive and automation tasks. The C5 embraces the PLCOpen philosophy: standardized software, on all hardware platforms, allowing OEMs to focus on machine solutions instead of brand specific component solutions.

C5 Compact
4 Axis Controller

C5 Enhanced
8 Axis Controller

- ▲ 4 (8) Axis Coordinated motion
- ▲ IEC61131-3 programming (IL, Ladder, FBD, CFC, SFC, ST)
- ▲ PLC Open/Soft Motion/CNC libraries
- ▲ Native communication to KEB F5 units
- ▲ Optional Profibus Slave port (C5 Enhanced option)
- ▲ Connection to remote I/O HMIs via Modbus TCP
- ▲ Free programming suite "CoDeSys" by 3S

Unit	Onboard Axis	SD Card	Ethernet Ports	Part Number
C5 Compact	4	no	2	14C5B00-1000
C5 Enhanced	8	yes	1	19C5B00-1000

Motor Technology

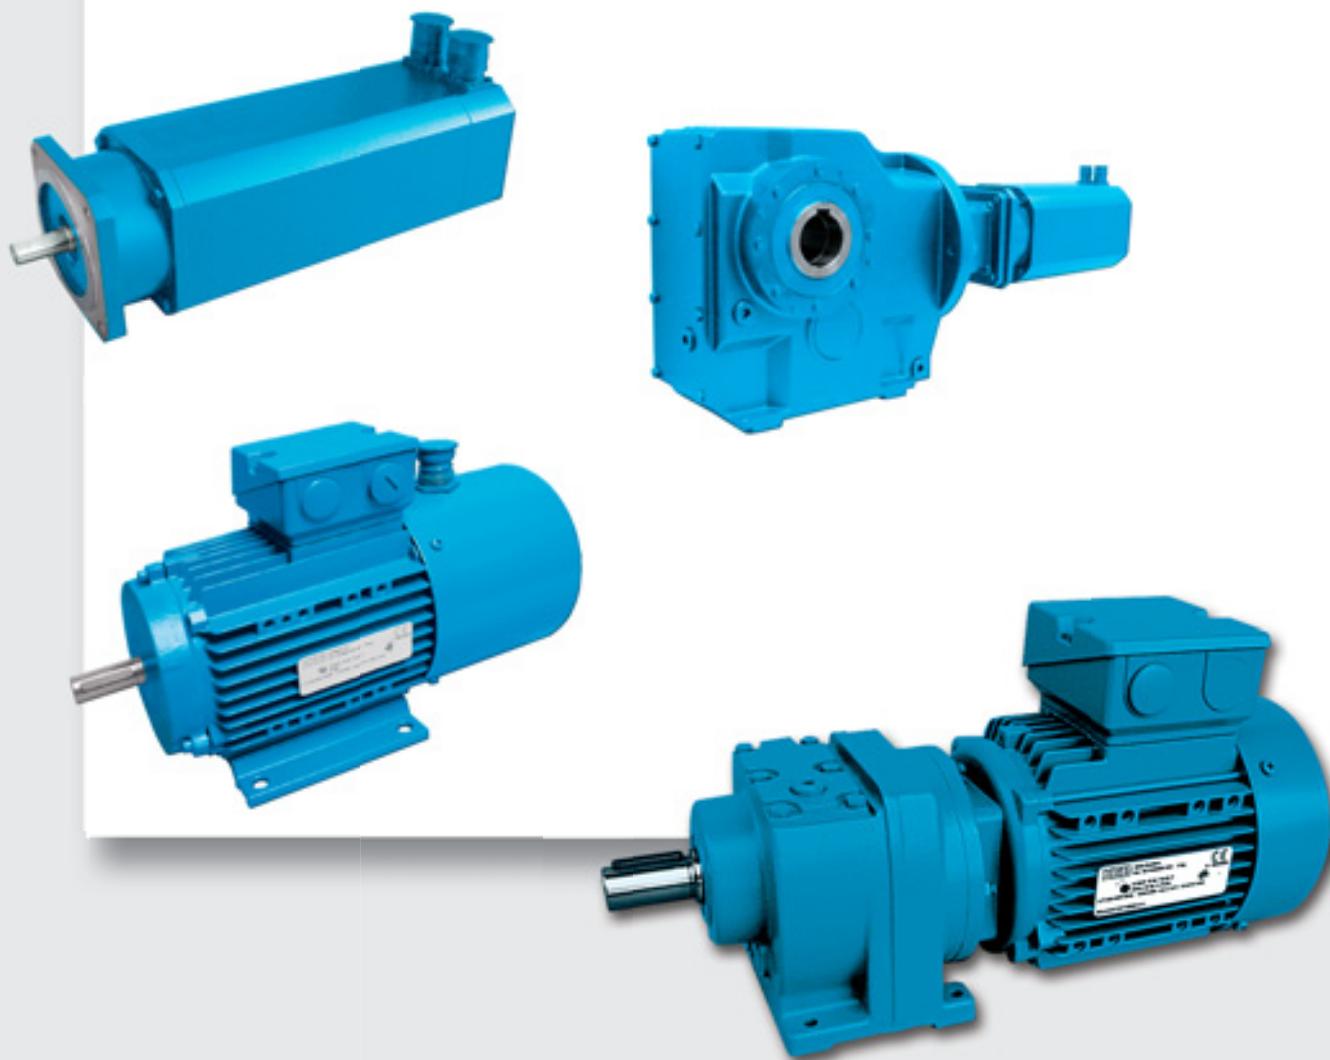

Servo motors with nominal torque up to 70 Nm

Induction motors with nominal power up to 200Hp

For complete drive solutions chose KEB induction and servo motors in combination with COMBIVERT F5 drives.

Chose from our extensive range of motors available with our own brake options, and feedback solutions matched to our drives. Drives can be pre-programmed for ease of use.

Detailed information on features, performance and technical data available in the KEB COMBIVERT-Motors catalog or visit www.kebamerica.com

Gearbox Technology

Industrial gear motors ensure the optimization of speed and torque. With **KEB COMBIGEAR**, a fully modular system is available in:

- **helical inline**
- **helical shaft mounted**
- **helical bevel**
- **helical worm**

Key features of the range are the finely graduated ratios, compact construction and robust, cast iron housings.

Tuned to the KEB COMBIVERT F5 inverter, these units are ideal for complete system solutions **up to 75Hp**.

High dynamics combined with minimal backlash are the main requirement for servo applications. KEB synchronous motors in combination with powerful **planet gears** or the gearboxes from the KEB COMBIGEAR range fulfil these requirements to give a cost effective solution.

With **KEB DRIVE**, the designer can easily select and review product options and drawings.

By using KEB Drive the best solution can be selected from our range with full technical details, and options available.
